

09.04.01 Computer Science and Engineering

Innovative software systems. Design, Development & Applications

Chair: Automation of design and graphics

The program offers a systematic training in the design, development and application of innovative software systems in various spheres of human activity. Such software can interact with various objects, structures, tools, etc. used in human economic activity, and in any area - from financial to mechanical and electronics. After the master degree, our highly qualified specialists will be able to apply their skills in research, production sphere, in the sphere of management, etc.
